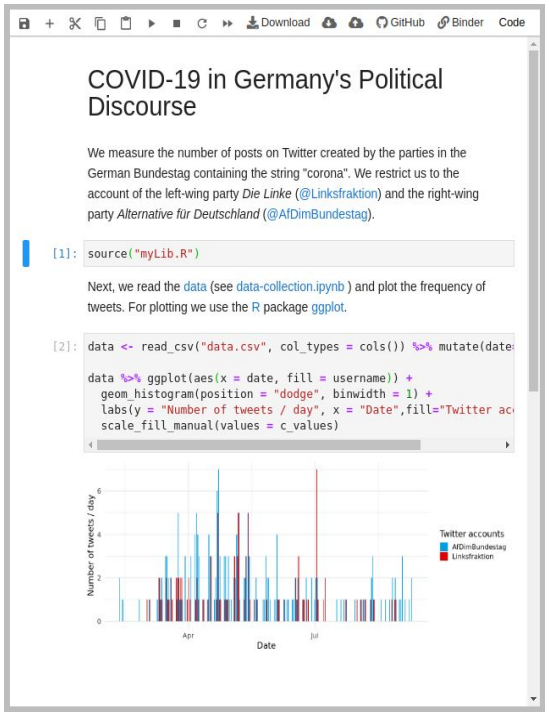
Computation

Cloud:

- ❏ potentially large Data
- ❏ standardized environment
- ❏ 1-Click reproducibility



Personal Computer:

- ❏ only small data
- ❏ every environment different
- ❏ time consuming to set up

What does jupyter-repo2docker ?

Consider you want to build and run a simple binder repository

https://github.com/binder-examples/requirements

How would you proceed?

1) git clone https://github.com/binder-examples/requirements
2) pip install -r requirements.txt
3) jupyter notebook
